

RADWIN Chosen by Arvada Fire Department in USA for High-Capacity Connectivity

- RADWIN's wireless broadband systems connect Fire Stations, providing dedicated, long-range connectivity -

Tel-Aviv, Israel – October 14, 2009 - RADWIN (www.radwin.com), a leading provider of Backhaul and Broadband Wireless Solutions, today announced that the Arvada Fire Department in Colorado, USA, chose RADWIN's systems to connect Fire stations to headquarters and provide high-capacity, long-range connectivity. Telworx, RADWIN's Certified US Partner, was the distributor for the project.

Scott Winberg, IT specialist, Arvada Fire Department, stated: "We were previously leasing T1 lines and paying tens of thousands of dollars per year to connect our stations with headquarters. Additionally, one of the stations was also the data center and the 1.5 Mbps was simply not adequate for our needs. We had previously looked at a licensed radio network, but found it was too expensive and that it would take years to recoup our investment. We then decided to evaluate license-free wireless broadband systems because they presented a compelling price/performance offering. Today, following the deployment of RADWIN's radios, we couldn't be happier with their high capacity and performance."

Chris Day, Vice-President of Wireless Sales, Telworx, stated: "We knew RADWIN's systems were perfect for this project based on previous successes. We deployed a combination of WinLink 1000 and RADWIN 2000 systems, and the Arvada Fire Department now has a 48 Mbps net throughput connection between the data center and HQ and at least 15 Mbps to all the stations. They expect to have an ROI of about 12-14 months while increasing their service to each location by at a factor of 10X or more."

Ilan Moshe, President, RADWIN US, stated: "We are proud to serve the Arvada Fire Department. Our systems meet the mission-critical voice & data needs of First Responders such as Fire, Police and Emergency services. With our systems, Emergency Services can connect stations and benefit from a high-speed, reliable connection at a competitive price."

RADWIN links deployed in Multiple Point-to-Point configuration, delivering dedicated bandwidth to each remote Fire Station

About Telworx

TelWorx Communications, LLC, is a certified distributor of products, solutions and technical services for wireless, wire line, data centers and government customers. They are a market leader in wireless applications, solutions and technical services; wire line applications, solutions and technical services; and all aspects of federal telecommunications services. Telworx supports entities ranging from wireless/telecom providers and resellers to government and all users of major voice, video and data communication technologies. Go to: www.telworx.net

About RADWIN

RADWIN delivers wireless backhaul and broadband access solutions in the sub-6GHz space, empowering carriers and service providers to connect subscribers everywhere. Whether voice, data, or video streaming, the company provides wireless broadband solutions of unrivaled performance, capacity, range, and quality at competitive prices. Established in 1997, RADWIN has installations in over 110 countries around the world.
