

## RADWIN Signs Multi-Year Agreement for Thousands of Wireless Links with iBurst, South Africa's Leading Broadband Provider

*- RADWIN to provide high-capacity wireless Point-to-Point links; RADWIN will showcase solutions at AfricaCom, Nov.10-11, Booth A28 -*

Tel-Aviv, Israel – November 10, 2010 - RADWIN ([www.radwin.com](http://www.radwin.com)), the global provider of Backhaul and Broadband Wireless Solutions, today announced that it has signed a multi-year agreement with Wireless Business Solutions (WBS), the holding company of iBurst. iBurst is South Africa's leading wireless broadband service provider. Under the terms of the agreement, RADWIN will provide thousands of links to enable iBurst to build metro Ethernet rings and provide last mile connectivity to its high-end corporate clients. iBurst has been deploying RADWIN's solutions in large numbers since 2007.

RADWIN's solutions deliver up to 200 Mbps throughput and operate at ranges of up to 120 Km/75 miles. These carrier-class solutions incorporate MIMO and OFDM technologies and offer a unique multi-band feature which supports multiple frequencies on the same platform, helping set a new benchmark in performance and reliability. RADWIN radios also offer a unique built-in Ring topology that was designed specifically for the ISP market and saves the need to use switches at the customer's premises.

"We have been deploying RADWIN's links since 2007 and they have exceeded our expectations in terms of price, performance and reliability," said Sasan Parvin, CTO of iBurst. "Our valued corporate customers depend on us to deliver reliable, bandwidth-intensive broadband services, and by deploying RADWIN's Point to-Point solutions we are consistently able to provide high quality, high speed service and expand our network to all areas of the region quickly and affordably."

Sharon Sher, RADWIN's President and CEO, stated: "This multi-year agreement between RADWIN and iBurst cements the strong relations between the two companies. It is a great honor for RADWIN to play such a major role in iBurst's network, which is one of the most advanced ISP networks in the region. For ISPs and service providers worldwide, RADWIN offers an unbeatable value proposition of high-capacity, long range connectivity solutions at affordable prices."
